Chief, Military/Scientific Division, PIC

Requirement DP/R39/59

1. The line drawing enclosures refer to the two radio stations located eight statute miles west of Baghdad, Iraq (see enclosed Mosaic). The stations are surrounded by a fence and cover an area approximately 1.2 miles long and .4 miles wide. Access to the stations is by the primary east-west highway from Baghdad and is controlled by guard shacks and gates. Area A indicates the main buildings at the old station and area B the relatively new station.

2. The enclosed mosaic indicates a power line leading towards these stations but it cannot be traced into any of the buildings.

3. Cable scars are apparent in Area B but in most cases cannot be traced to their terminus. Cable scars in area A cannot be distinguished from extensive natural ground scarring.

4. The dashed lines on the buildings indicate different roof levels. Heights are indicated by the letter H and are only approximate.

5. The narrow rectangular projections and square object on the northeast top of the main building in area B are only slightly higher than the roof they project across. These are probably associated with a ventilation or cooling system. The elliptical shaped excavation in front of this building is probably to be used as a cooling pond.

Enclosures: Three line drawings and one rectified mosaic (NF-PH-001).
